Working with the OpenAI API

Introduction to Databricks

The MCP Course - HuggingFace

Nipun David

Building AI Platform @BCG, Ex-Nagarro
Gurugram, Haryana, India

Summary

- 15+ years of software development experience and 6+ years of consulting experience, currently working on production-ready Gen AI, agentic AI, and cloud solutions.
- Experience on LangGraph, Databricks, OpenAI APIs, RAGs (Retrieval Augmented Generation), and Hugging Face models.
- Hands-on experience with cloud for deploying intelligent solutions. Rapid Prototyping.
- Skilled in developing cloud-native applications, and AI-based prototypes, and integrating them into complex systems through collaboration with domain experts.
- Expertise in AR/VR platforms, leading 3D pipelines, and delivering solutions across automation, aerospace, and manufacturing.

Experience

Boston Consulting Group (BCG)

Software Engineer Senior Manager - Gen AI/LLM

May 2025 - Present (1 year 3 months)

Gurugram

- Building enterprise-grade, reusable GenAI intelligence platforms with embedded RAI and LLMOps foundations.
- Designing agentic AI systems leveraging A2A protocols, MCP, graph reasoning, and tool-augmented LLM workflows.
- Operationalizing LLMs at scale through evaluation frameworks, monitoring, observability, versioning, and governance controls.
- Driving innovation via structured experimentation across vendor ecosystems and OSS AI stacks.
- Translating complex business problems into secure, scalable, production-ready AI systems.

Nagarro

8 years 4 months

Associate Principal Engineer

June 2023 - May 2025 (2 years)

Gurugram, Haryana, India

- Led end-to-end design and development of enterprise-grade Retrieval-Augmented Generation (RAG) solutions, including document parsing, chunking, vectorization, and semantic search using OpenSearch and Amazon Bedrock.
- Architected and deployed a scalable GenAI pipeline on AWS, utilizing S3, Lambda, SQS, DynamoDB, and VPC to ensure secure data processing and model inference within a private cloud environment.
- Implemented robust guardrails for RAG-based chatbots, including prompt-level moderation, fallback mechanisms, and domain-specific response constraints to ensure reliability and safety in enterprise use cases.
- Integrated advanced agents (smol-ai/smol-agents) into existing RAG infrastructure to enable autonomous task execution and multi-step reasoning with tool-use capabilities.
- Provided technical leadership across GenAI initiatives, mentoring cross-functional teams, optimizing vector search performance, and driving adoption of best practices in prompt engineering, and evaluation.

Senior Staff Engineer

April 2021 - June 2023 (2 years 3 months)

Gurgaon, India

- Managed code repositories and took responsibility for reviewing pull requests related to daily development tasks.
- Demonstrated expertise in understanding and integrating with external systems by creating suitable adapters.
- Provided support to the pre-sales team and collaborated with architects in responding to Requests for Proposals (RFPs).
- Assisted other members of the team in bug fixes and sharing best practices.

Staff Engineer

April 2020 - June 2021 (1 year 3 months)

Gurugram, Haryana, India

- Worked closely with architects to ensure the best possible design solutions.
- Conducted feasibility studies as required for project evaluation.
- Developed base frameworks to facilitate the work of developers.
- Conducted code reviews and enforced best practices within the team.

Lead

October 2018 - April 2020 (1 year 7 months)

Gurugram, Haryana, India

- Thoroughly documented the work and analysis conducted on various Software Development Kits (SDKs) available in the market.
- Prepared comprehensive study materials for training programs focused on the XR domain.
- Took charge of implementing code at a low level based on provided architectural diagrams.
- Kept abreast of the latest trends and advancements in the AR/VR landscape, ensuring up-to-date knowledge in the field.

Associate Lead

February 2017 - October 2018 (1 year 9 months)

Gurgaon, India

- Engaged in multiple Proof of Concepts (PoCs) for enterprise clients, demonstrating versatility in addressing their specific needs.
- Developed native plugins for Android and iOS platforms, enabling the integration of AR apps into existing applications.

Classteacher Learning Systems

Unity3d Lead Developer

August 2016 - February 2017 (7 months)

Gurgaon, India

- Led the end-to-end product lifecycle, driving the process from ideation to release.
- Played a key role in developing the monetization strategy for the product.
- Developed a comprehensive base framework that serves as the foundation for creating mini-games and activities.
- Created simulations and animations for advanced topics such as projectile motion, catering to higher-grade classes.
- Showcased a product demo to prospective investors for initial funding at the Frankfurt Book Fair in Frankfurt, Germany.
- Assembled a talented team of artists and developers to build an extensive library of AR experiences specifically designed for students.

Education

The University of Texas at Austin

Postgraduate Certificate, Artificial Intelligence & Machine Learning · (January 2024 - February 2025)

Birla Institute of Technology and Science, Pilani

Master of Technology - MTech, Computer Science · (September 2019 - August 2021)

Sam Higginbottom University of Agriculture, Technology And Sciences (SHUATS)

Bachelor's Degree, Computer Science · (2008 - 2012)
